ABB reserves the right to change the designs, technical specifications and dimensions without prior notice.

Data presented in rating lists are typical values. Accurate motor data will be given on request at the quotation phase.

All ratings in this catalog are designed for the following:

- Class F insulation / Maximum temperature rise of 80K by resistance
- 40°C ambient
- Altitude of 1000 meters or less

High voltage general purpose motors

N-series

High voltage general purpose motors from ABB combine cost-efficient standardized designs and short lead times with safety, productivity, energy efficiency and reliability. They are targeted at applications where a highly customized motor is not needed.

This catalog covers ABB's N-series high voltage general purpose motors: rib cooled motors (type NXR), modular induction motors (type NMI).

With their standardized designs and short lead times, the N-series high voltage pre-engineered motors meet most common needs across a wide range of industries.

Based on broad experience of different industries and applications, the motors use cost-effective pre-packaged designs to meet the same high quality standards as all ABB motors but with lead times that are several weeks shorter.

The pre-engineered N-series complements the A-series of engineered motors, which are highly customized, fine-tuned to the customer's precise needs, and offer a high degree of engineering flexibility.

Like all ABB products, the N-series motors are backed by ABB's global support network, which includes over 60 service centers and more than 150 authorized service providers worldwide. The availability of round-the-clock access to spares, repairs and replacements, as well as predefined maintenance programs for all stages of the product life cycle, helps customers to minimize downtime and reduce their cost of ownership.

MachSize

Easy-to-use online selection tool

Handy online tool makes it possible to select and buy a high voltage motor in just a few minutes.

MachSize is an intuitive online tool which reduces the time needed to get a quotation and order a motor from several days to just a few minutes. MachSize enables you to configure N-series high voltage general purpose motors, generate quotations, send orders and obtain all the necessary documentation. It guides you through the motor selection process in a series of straightforward, logical steps.

Because MachSize is an online tool, it can be accessed 24/7 on laptops, tablets, phones – any device that has a browser and Internet connection.

MachSize is targeted at registered customers and ABB partners like distributors and OEMs.

If you would like to try MachSize, please contact ABB. Our local sales unit will help you to register. After registration you can access it by scanning the QR code on the right.

Rotor and stator

Rotor

The key to a long rotor operating life is minimal vibration. This is achieved through robust construction and careful balancing. ABB selects the shaft material according to the demands of the application and the ambient conditions in which the motor is to operate.

Squirrel cages are made of copper, copper alloy or aluminum, depending on the load and customer requirements. Additional stiffness is provided by fabricated rotor bars, which enable the motors to withstand long periods of heavy use. Aluminum bars and end rings are used to ensure optimal starting characteristics.

Once assembled each rotor is dynamically balanced at full operating speed in accordance with the ISO 1940-1 and ISO 11342 standards on mechanical vibration.

Stator

The stator core is welded and machined to form a solid and compact unit that retains its rigidity throughout the life of the motor. Radial air ducts ensure uniform and efficient cooling.

When completely wound and connected, the stator is vacuum pressure impregnated and cured with ABB's Micadur® Compact Industry insulation system, a specially formulated epoxy resin used by ABB to insulate all its rotating electrical machines over the past 30 years. Micadur ensures a sealed and homogeneous insulation system, resulting in low dielectric losses, high dielectric strength, excellent heat transfer and the elimination of hazardous internal partial discharges.

As standard, all motors are designed to stay within temperature Class B.

Main terminal boxes

Technical data:

Voltage (max.)	6.6 kV
Current (max.)	800 A
No. of cables (max.)	2 per phase
Cross section of cables (max.)	300 mm ² /cable
Cable gland	blind gland (1 pce)
Clearance (min.)	60 mm
Creepage (min.)	89 mm
Gross volume	197 dm ³
Usable volume	189 dm ³
Connection screws	(M16x1/M12x2/ M10x2)/phase
Tightening torque for connection nuts	190 Nm (M16), 55 Nm (M12), 46 Nm (M10)
Ground connections	M12 (both in- and outside)
Weight	90 kg
Protection Standards	IP55/IP66 DIN 42962 Teil 2, D2 (internal dimensions)

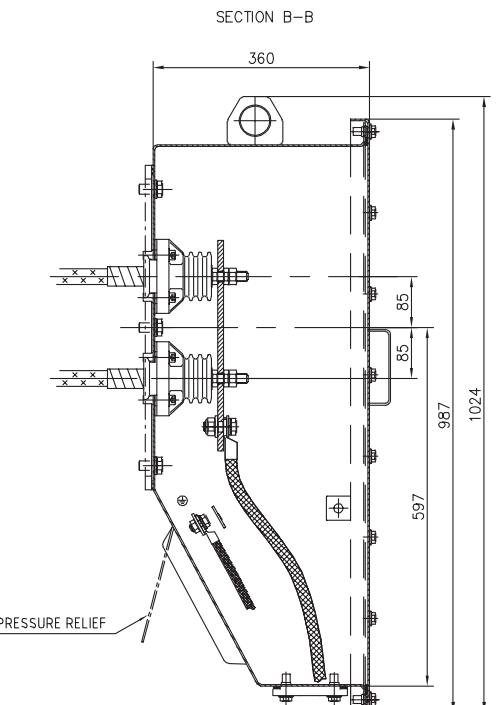

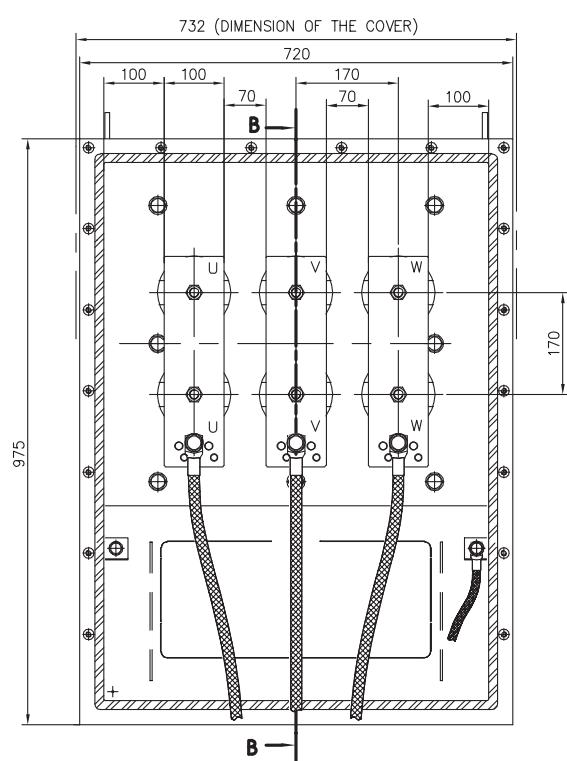

Materials:

Box	welded sheet steel (thickness min. 3 mm)
Cable gland plate	steel
Connection screws	bronze
Isolators	polyurethane resin or epoxy casting resin
Grounding pad	stainless steel

Other features:

- rigid welded construction
- ample size for connecting supply cables
- box turnable to allow cable entry from left or right
- box turnable in steps of 90°
- either 3-phase or 1-phase cables can be connected
- pressure relief plate in bottom of box in case of arcing short circuit

01 High voltage terminal box, max 6.6 kV/800 A.
Dimensions in mm.

Main terminal boxes

Technical data:

Voltage (max.)	11.0 kV
Current (max.)	400 A
No. of cables (max.)	1 per phase
Cross section of cables (max.)	300 mm ² /cable
Cable gland	blind gland (1 pce)
Clearance (min.)	100 mm
Creepage (min.)	163 mm
Gross volume	127 dm ³
Usable volume	117 dm ³
Connection screws	M16 (3 pcs)
Connection nuts	tightening torque 40 Nm
Ground connections	M12 (both in- and outside)
Weight	62 kg
Protection Standard	IP55/IP66 DIN 42962 TEIL 2, C2

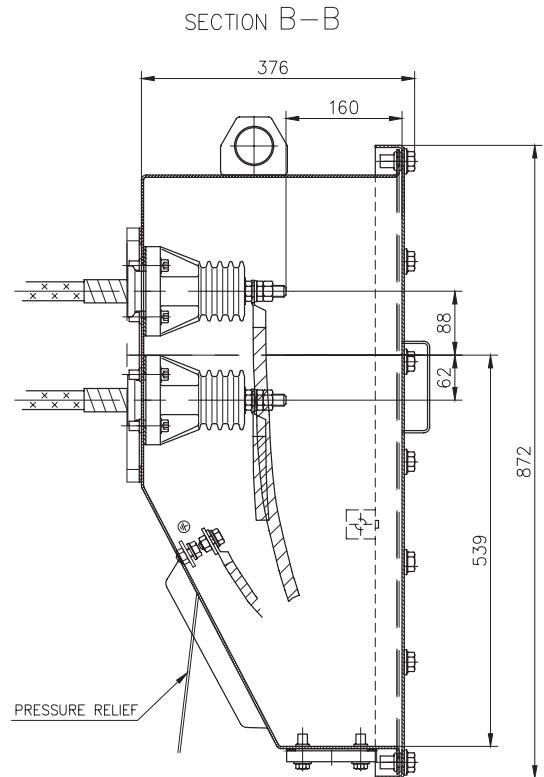

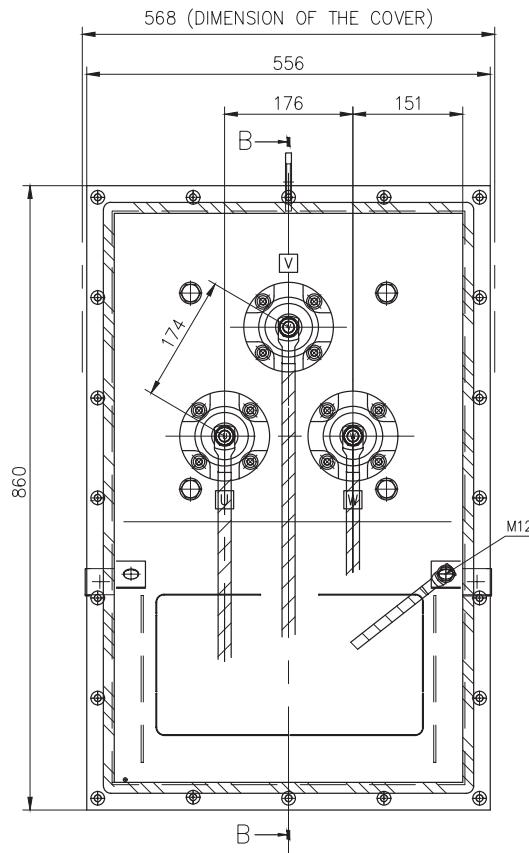

Materials:

Box	welded sheet steel (thickness min. 3 mm)
Cable gland plate	steel
Connection screws	bronze
Isolators	epoxy casting resin
Grounding pad	stainless steel

Other features:

- rigid welded construction
- ample size for connecting supply cables
- box turnable to allow cable entry from left or right
- box turnable in steps of 90°
- either 3-phase or 1-phase cables can be connected
- pressure relief plate in bottom of box in case of arcing short circuit

02 High voltage terminal box, max 11 kV/400 A.
Dimensions in mm.

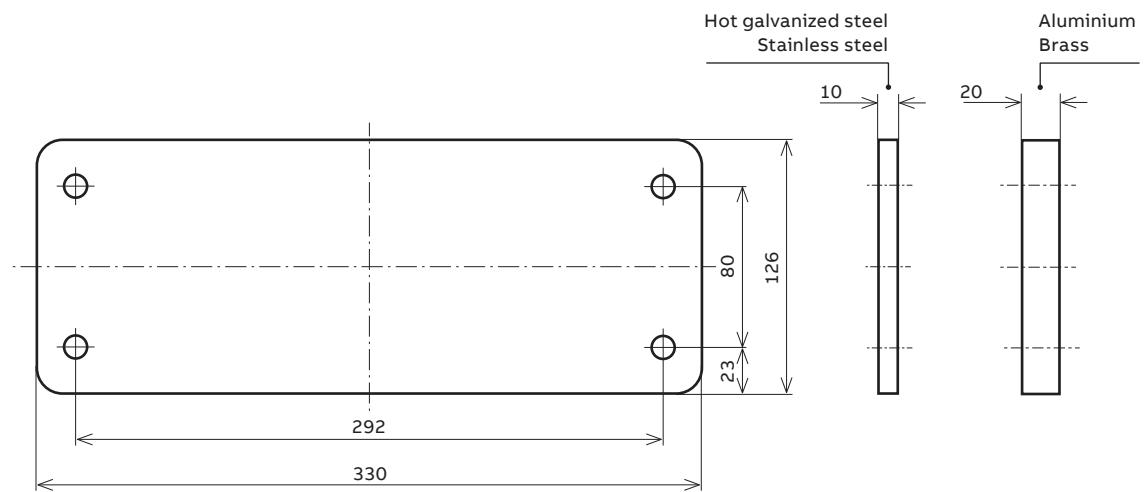

Main terminal boxes

Dimensions for terminal box inlet, blind flange

As standard, main terminal boxes are supplied with a blind flange.

03 Blind flange FL 33
for terminal box.

Auxiliary terminal boxes

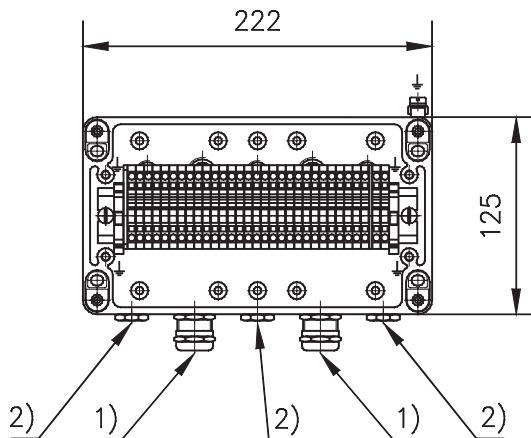

As standard, motors in safe areas are equipped with one common auxiliary terminal box for monitoring devices and space heaters.

Standard auxiliary terminal boxes

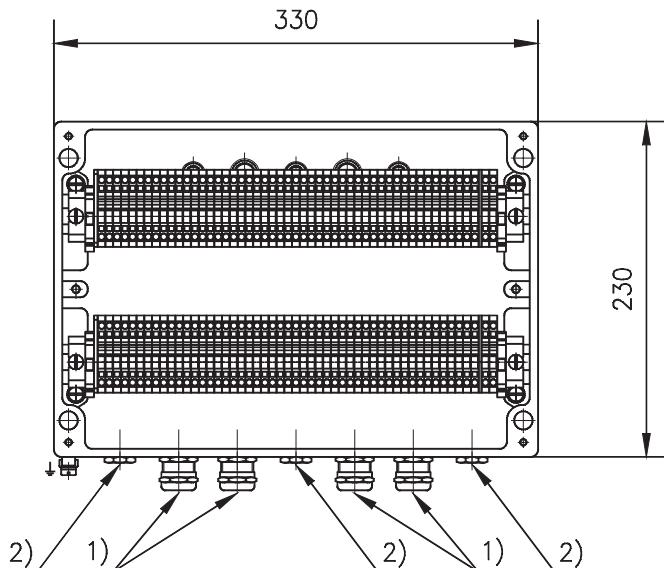

Type designation	Use	Size (H x D x W) mm
Small terminal box	Standard	125 x 81 x 222
Large terminal box	When additional space needed	230 x 180 x 330

Typical arrangements for standard terminal boxes are shown below. The number of terminal blocks depends on the number of accessories used with the motor.

- - 04 Small terminal box with terminal blocks and cable glands.
 - 1) Cable gland M20x1.5 for cable outer diameter 10 to 14 mm (2 pcs)
 - 2) Threaded hole for cable gland M16x1.5 (3 pcs), plugged.

- - 05 Large terminal box with terminal blocks and cable glands.
 - 1) Cable gland M20x1.5 for cable outer diameter 10 to 14 mm (4 pcs)
 - 2) Threaded hole for cable gland M16x1.5 (3 pcs), plugged.

Bearings

This chapter provides information about bearings for NXR and NMI motors.

Horizontal motors, antifriction bearings

Horizontal motors in frame sizes 315 to 500 have deep groove ball bearings at both ends. The NMI 560–630 has a double bearing arrangement (a deep groove ball bearing and cylindrical roller bearing) at the D-end and a cylindrical roller bearing at the N-end (only horizontal motor available). 2 pole motors in frame size 500–630 have sleeve bearings as standard solution.

The bearing at the D-end is axially locked in horizontal motors. Standard bearings for horizontal motors are listed in the table below and the bearing construction is shown in the figures on page 12.

The standard bearing solution is designed to carry the weight of a typical coupling half and the motor's rotor only. Any additional radial or axial force caused by the driven equipment may require specially constructed bearings.

Standard bearings for horizontal motors

Frame size	Poles	D-end	N-end

Bearings

Rated lifetime

Most standard bearings have a rated lifetime L_{10h} in excess of 100,000 h. The lifetimes are calculated in accordance with ISO R 281-1.

The basic rated lifetime L_{10h} is the number of hours at rated bearing load and speed that 90% of a group of identical bearings will complete or exceed before the first evidence of failure.

Lubrication intervals

The motors are fitted with grease nipple(s) at both ends for lubricating the bearings. The grease nipples are located on the top of the motor. The amount of grease and the greasing interval are stamped on the relubrication plate, and the same information is shown in the table below.

Relubrication intervals and grease amount for NXR motors

Bearing type	Amount of grease [g]	Lubrication intervals in running hours at different speeds [rpm]									
		3600	3000	1800	1500	1200	1000	900	750	600	≤ 500

_044	96	NA	3000	4400	6600

Horizontal motors, sleeve bearings

As standard, the axial float of the rotor is ±8 mm from the mechanical center. The running center is located within the float area and therefore operation is also allowed while the motor is uncoupled eg, during test running. As standard, a pointer showing the running center with regard to the end limits is available. Continuous axial forces are not permitted and therefore a limiting type of coupling is needed to ensure the location of the rotor within the axial float range.

Sleeve bearings are generally self-cooled, oil ring lubricated but some require forced lubrication. Please see the lubrication table for next page for standard lubrication requirements based on a maximum 40°C ambient and 50 Hz operation. Consult ABB for ambient temperatures above 40°C, or for self-cooling of bearings where flood lubrication is standard. Units requiring flood lubrication are supplied with provisions only. Refer the oil supply pressure, type of oil, and location of provisions to the factory for review prior to order acceptance.

Vertical motors, ball bearing construction

Standard vertical motors use deep groove ball bearings at the D-end and angular contact ball bearings at the N-end. The bearing at the D-end is axially free and preloaded by springs. The angular contact ball bearing at the N-end is the locating bearing and carries the weight of the rotor. The bearing construction is shown in the figures on page 16.

Additional axial force from the driven equipment is not allowed for vertical motors with a standard ball bearing arrangement.

The rated bearing lifetimes for vertical motors are calculated according to the heaviest rotor and the weakest bearing in the motor.

For standard vertical motors, the lubrication intervals are half of the corresponding horizontal motors. The amount of grease and greasing interval are stamped on the lubrication plate.

Vertical motors, thrust bearing construction

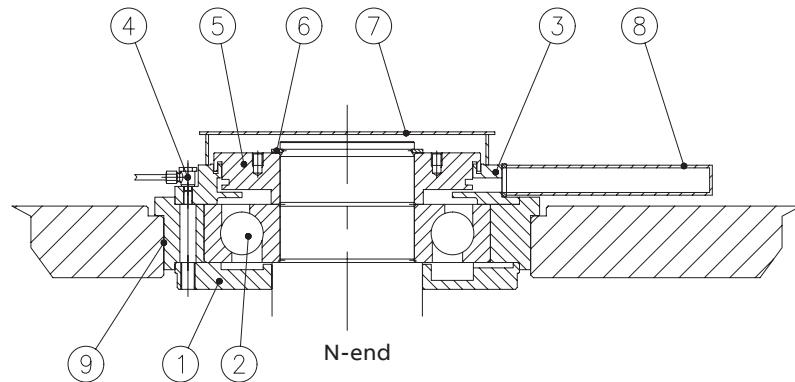

Vertical motors with thrust bearings are designed for applications where the motor has to take the thrust force from the driven equipment.

The permissible axial downward force depends on the specific bearing type, rotation speed, rotor weight, ambient temperature, lubrication method, etc. To enable ABB to select the appropriate bearing construction, contact us with information about the amount of thrust force and its direction, the expected bearing lifetime, and site temperature conditions and altitude.

Vibration

Standard design

The standard design machines that are manufactured based on the IEC-standard satisfy the Grade A bearing housing vibration, relative shaft vibration and combined runout limits found in IEC 60034-14. The maximum accepted values are shown in the table below.

— Standard design unfiltered vibration limits for IEC machines

Poles	Speed [rpm]	Bearing housing vibration	Relative shaft vibration	Combined runout
2	1800 < n ≤ 3600	2.3 mm/s rms	65 µm p-p	16 µm p-p
		2.8 mm/s rms *)		
≥ 4	600 ≤ n ≤ 1800	2.3 mm/s rms	90 µm p-p	23 µm p-p
		n < 600		

*) This level is the limit when twice line frequency vibration level is dominant. A twice line frequency component is considered dominant when type test demonstrate it to be greater than 70 % of 2.3 mm/s (rms).

Machines based on NEMA

The standard machines that are manufactured based on the NEMA-standard satisfy the Grade A bearing housing vibration, relative shaft vibration and combined runout limits found in NEMA MG 1. The maximum accepted values are shown in the table below. For bearing housing vibrations, limits given in vibration velocity peak (in/s peak) apply for rotational speeds between 1200 – 3600 rpm. For rotational speeds below 1200 rpm, limits given in vibration displacement (mils p-p) apply.

— Unfiltered vibration limits for NEMA standard design machines

Poles	Speed [rpm]	Bearing housing vibration	Relative shaft vibration	Combined runout
2	1800 < n ≤ 3600	0.12 in/s peak (3.0 mm/s peak)	2.6 mils p-p (66.0 µm p-p)	0.65 mils p-p (16.5 µm p-p)
4, 6	1200 ≤ n ≤ 1800	0.12 in/s peak (3.0 mm/s peak)	3.5 mils p-p (88.9 µm p-p)	0.88 mils p-p (22.3 µm p-p)
≥ 8	n < 1200	1.9 mils p-p (48.2 µm p-p)	3.5 mils p-p (88.9 µm p-p)	0.88 mils p-p (22.3 µm p-p)

Rib cooled motors, type NXR

More know-how per kilogram

The latest generation of multipurpose rib cooled motors offers high power density, easy configurability and built-in serviceability. They incorporate experience ABB has gained over more than 130 years of manufacturing electric motors.

These motors set a benchmark for the industry, offering more watts per kilogram than has ever been achieved before with rib cooled motors.

High power density means that for a given output you can often use a motor one frame size smaller than with conventional products. This helps to save space and enables more compact installations.

NXR motors have a rugged cast iron frame. They are rib cooled motors with IC411 cooling and IP55 protection as standard. The motors are also available with IC416 cooling and optional IP66 protection. Their IP66 protection has been

verified by a leading independent testing organization.

NXR motors cover the output range up to 1,800 kW, and they are available in shaft heights from 315 to 500 mm. The complete range is designed for fixed speed drive applications with DOL power supply, and is available for VFD cases fed by frequency converters. The motors can be mounted horizontally (vertical mounting available for 2 poles up to shaft height 355). For NXR motors this catalog shows the technical data at 50 Hz and 60 Hz, and for synchronous speed from 500 to 3600 rpm.

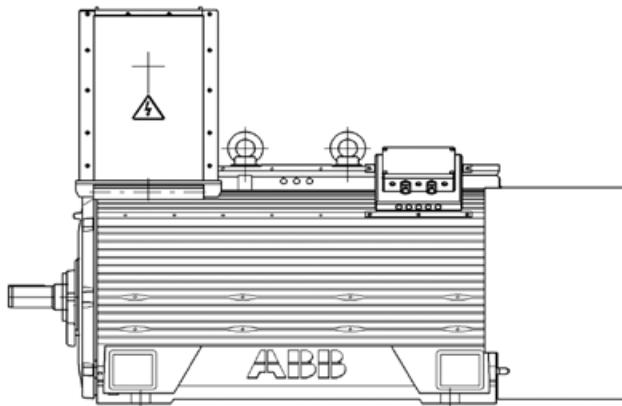

Rib cooled motors, type NXR

Enclosure and cooling

Standard combinations

IC411 / IP55

NXR motors have an external shaft mounted fan that uses the surrounding air for cooling. The motors are protected against dust and water jets. The operating principle of these motors is shown in diagram 14 below.

IC416 / IP55

NXR motors are available with IC416 cooling. An additional motor drives the cooling fan to produce the cooling required for low speed applications, especially in cases where the motor is fed via a variable speed drive.

Protection rating IP55

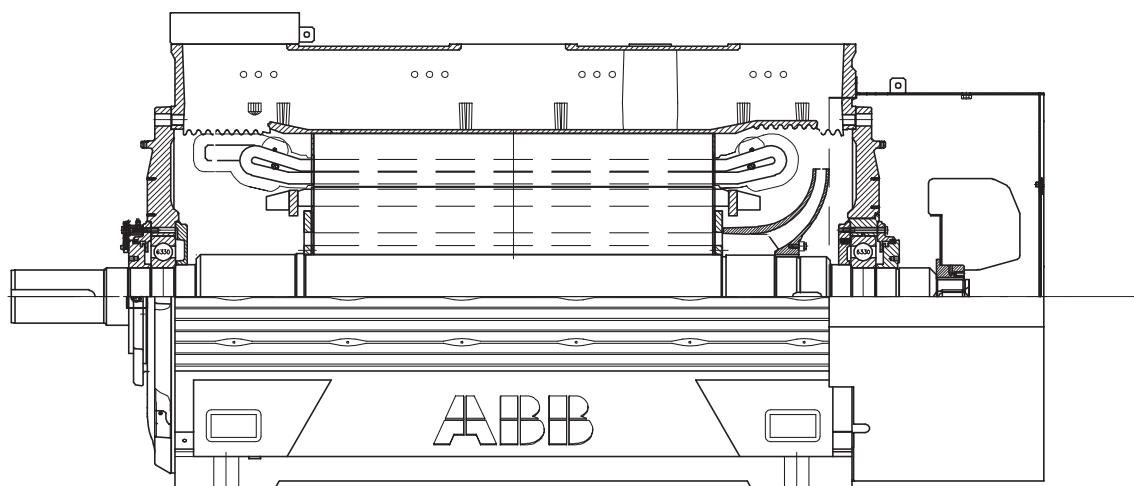

- Protection against dust: as in other dust-protected motors, some dust can enter but not in sufficient quantities to interfere with the motor's operation.
- Protection against water jets: water projected by a nozzle against the motor from any direction has no harmful effect.

Protection rating IP66

NXR motors are available with protection ratings up to IP66.

- Protection against dust: the enclosure is completely dust tight.
- Protection against water jets: water projected in powerful jets (12.5 mm nozzle) against the enclosure from any direction has no harmful effect.

Table gives main dimensions in mm.

General purpose above NEMA motors, type NXR

Available from stock

General purpose above NEMA motors fit most applications where a highly customized motor is not needed. Totally enclosed fan cooled motors, type NXR, are available from stock or with short lead times.

Motor modifications to fit application requirements

Supplied direct from the factory in Kings Mountain, North Carolina, NXR motors have 39 modifications available to allow them to meet specific application requirements. The modifications range from bearing type change-outs to upgrading to IP55 ingress protection. These modifications allow you to tailor N-series motors to fit your applications without having to order a highly custom engineered motor.

By using a variable speed drive, you can optimize the motor's performance, minimize energy consumption and control your process more accurately. With increasing use of VSDs, it is always an advantage to have a motor that is capable of being adapted for VSD use later. This provides additional flexibility to configure your processes in the future.

General purpose above NEMA motors, type NXR

Key features and benefits

- High efficiency for energy savings
- 3.5 PU surge capability
- Suitable for use on a VSD 2:1 CT / 10:1 VT (most ratings)
- CSA approved
- Class I Division 2 Group C and D approved
- Cast iron frame and end brackets
- Space heaters
- 100 Ohm platinum winding RTDs
- Class F insulation
- Insulated ODE bearing
- F1 terminal box mounting
- Provisions for bearing RTDs
- “LR” shafts have roller bearings and are belted duty
- “L” shafts have ball bearings and are convertible to roller bearings
- “S” shafts have ball bearing for coupled duty
- The paint is a specially formulated modified epoxycoating with UV protection
- Performance data, drawings and other information is readily available
- In-stock or short lead times

Main specifications

Rated horsepower	250 Hp to 1000 Hp
Frame sizes	5008 to 5810
Number of poles	2 to 8 pole
Voltages	460, 2300/4000
Frequency	60 Hz (50 Hz re-ratable)
Service factor	DOL: 1.15, VSD: 1.00
Insulation class	F
Cooling	Fan cooled
Protection	IP54
Enclosure	Totally enclosed fan cooled (TEFC)
Mounting	Horizontal
Bearings	Ball and roller (convertible)
Standards	Above NEMA

General purpose above NEMA motor, type NXR

Modular induction motors, type NMI

Easy to buy, integrate and use

NMI modular induction motors provide a cost-efficient solution for safe area applications. They are easy to integrate into the process due to their compact design, interface flexibility, and low noise.

NMI motors have a welded steel frame. They are rated from 160 to 8,000 kW, and are available in shaft heights from 355 to 630 mm.

The complete range is designed for fixed speed drive applications with DOL power supply, and is available for VFD cases fed by frequency converters.

The motors are available for horizontal or vertical mounting. Vertical mounting is specifically designed for vertical, condensate and circulating water pumps.

This catalog only shows the technical data at 50 Hz and fixed speed for synchronous speed from 1000 to 3000 rpm. For VFD cases and for more detailed technical data on NMI modular induction motors, please contact ABB.

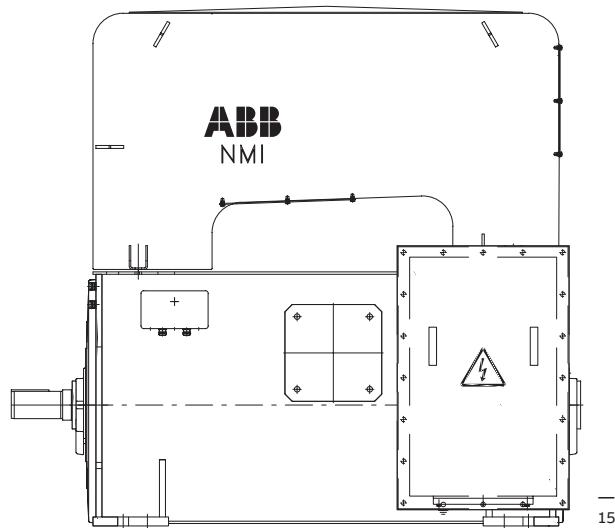

Modular induction motors, type NMI

Modular induction motors, type NMI

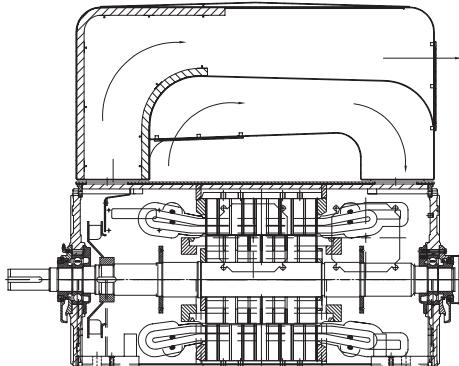

Enclosure and cooling

- 17 IC01 / IP24
- 18 IC01 / IP24W
- 19 IC611 / IP55
- 20 IC81W / IP55

Standard combinations for NMI motors:

IC01 / IP24, NMI 355-500

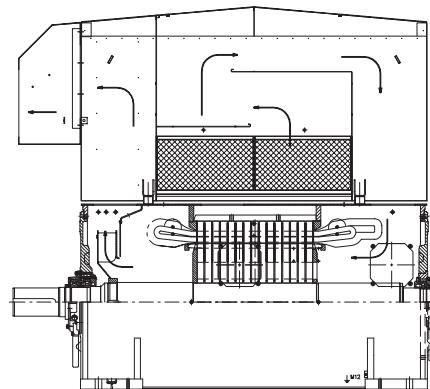

The motor has a shaft mounted inside fan (if any) using the surrounding air for cooling. The motor is so designed that the ingress of rain, snow and airborne particles into the electrical parts is reduced. The motor is protected such that splashing water from any direction will have no harmful effect. The standard filter material is galvanized steel.

— 17

IC01 / IP24W, NMI 560-630

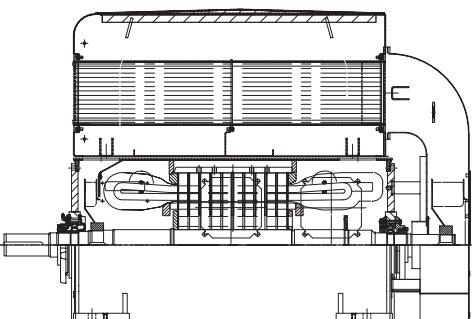

This weather protected motor has a shaft mounted cooling fan inside the housing. The design of the motor reduces the ingress of rain, snow and airborne particles into the electrical parts. In the air intake path this is achieved by ensuring that the average velocity does not exceed 3 m/s, allowing any heavier particles to settle. The design of the air intake path includes three acute direction changes in excess of 90 degrees to further reduce the flow rate to the optimal level. The motor is protected against splashing water from any direction.

— 18

IC611 / IP55

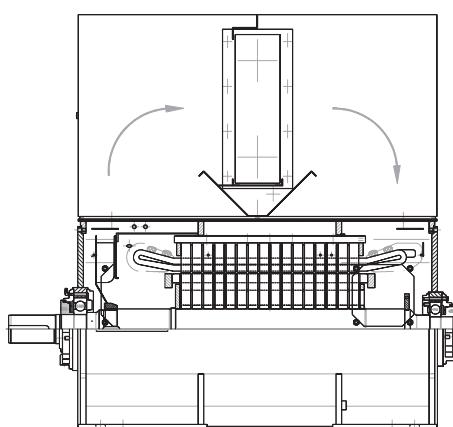

This design has an air-to-air heat exchanger mounted on the motor, which is fully enclosed. Shaft mounted fans are fitted both inside and outside of the casing to supply the inside and outside cooling circuits respectively. The motor is protected against dust and splashing water from any direction.

— 19

IC81W / IP55

This fully enclosed motor is fitted with an air-to-water heat exchanger. A shaft mounted fan is fitted inside the casing to supply the internal cooling circuit. The motor is protected against dust and splashing water from any direction.

— 20

Modular induction motors, type NMI

Technical data

The technical data on pages 56 to 79 covers NMI motors with 2 to 6 poles of cooling method IC611 and IC81W.

Motors with 8 to 16 poles, cooling method IC01, or other voltage ratings are also available.

You can get technical data by self-service in MachSize, or contact with ABB.

Total product offering

ABB offers a wide range of motors, generators and mechanical power transmission products with a complete portfolio of services.

IEC motors

- Low voltage motors
- High voltage induction and synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for food and beverage
- Motors for variable speed drives
- Permanent magnet motors
- Synchronous reluctance motors
- Traction motors

NEMA motors

- Low voltage motors
- High voltage induction and synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for variable speed drives
- Permanent magnet motors
- Servomotors
- Washdown motors

Generators

- Generators for wind turbines
- Generators for diesel and gas engine power plants
- Generators for steam and gas turbine power plants
- Generators for marine applications
- Generators for industrial applications
- Generators for traction applications
- Synchronous condensers for reactive power compensation

Mechanical power transmission components, bearings, gearings

- Mounted bearings
- Enclosed gearing
- Mechanical drive components
- Couplings
- Sheaves and bushings
- Conveyor components
- Geared motor units

Life cycle services

Life cycle services and support

From pre-purchase to migration and upgrades

ABB offers a complete portfolio of services to ensure trouble-free operation and long product lifetimes. These services cover the entire life cycle. Local support is provided through a global network of ABB service centers and certified partners.

Pre-purchase

ABB's front-end sales organization can help customers to quickly and efficiently select, configure and optimize the right motor for their application.

Installation and commissioning

Professional installation and commissioning by ABB's certified engineers represent an investment in availability and reliability over the entire life cycle.

Engineering and consulting

ABB's experts provide energy efficiency and reliability appraisals, advanced condition and performance assessments and technical studies.

Condition Monitoring and Diagnosis

Unique services provide early warnings before failures occur. Data can be collected by an engineer on-site or by remote monitoring. With the ABB Ability™ platform data can be transmitted to the cloud and accessed and analyzed remotely, allowing even greater insight into the health of the equipment. The services focus on the bearings, rotor winding, stator winding insulation and overall mechanical condition.

Maintenance and field services

ABB offers life cycle management plans and preventive maintenance products. The recommended four-level maintenance program covers the entire product lifetime.

Spare parts

Spare parts and support are offered throughout the life cycle of ABB products. In addition to individual spares, tailored spare part packages are also available.

Repair and refurbishment

Support for all ABB motors and other brands is provided by ABB's global service organization. Specialist teams can also deliver emergency support.

Migration and upgrades

Life cycle audits determine the optimum upgrades and migration paths. Upgrades range from individual components to direct replacement motors.

Training

Product and service training courses take a practical approach. The training ranges from standard courses to specially tailored programs to suit customer requirements.

Specialized support

Specialized support is offered through ABB's global service organization. Local units provide major and minor repairs as well as overhauls and reconditioning.

Service contracts

Service contracts are tailored to the customer's needs. The contracts combine ABB's entire service portfolio and 120 years of experience to deploy the optimal service practices.
